Evolve Exchange Announces A New EMR Vendor MU2 Integration

Delray Beach, FL - Evolve Exchange, a provider of cloud-based software to EMR vendors, has announced that Remedi Software and Systems has completed integration using their TwinLink Specialty White Label EMR. Following the integration, Remedi Software completed their 2014 CERHT process and is now among several other EMR vendors who have attained MU2 certification via a white label solution from Evolve Exchange.

As an Ophthalmology EMR vendor, Evolve Exchange and the Twin Link Specialty White Label solution were a perfect fit for Remedi Software.

“Evolve Exchange has provided a solution for Remedi Software & Systems to bring a certified and proprietary Ophthalmic software package to the market much quicker than we had originally projected” states George Lucas, CEO of Remedi Software & Systems. “With the utilization of the certified Evolve Exchange TwinLink white label solution we are in the market at a substantial savings in R&D and certification costs. Evolve Exchange has proven to be a highly professional and excellent business partner.”

TwinLink is specifically designed for specialty EMR vendors and their providers to meet meaningful use stage 2 certification. This integration allows for providers to continue using the original vendor software and launch the Evolve Exchange Certified EMR via a button within the application. Once the application is open, the MU Data Set is entered to achieve Meaningful Use Stage 2 Certification. A seamless integration allows for data synchronization between applications and Evolve Exchange will also suggest subtle UI workflow connections to maximize efficiency.

By choosing this innovative solution from Evolve Exchange, Remedi has saved research and development resources, streamlined their certification process and empowered their providers to meet Meaningful Use attestation deadlines.

About Evolve Exchange

Evolve Exchange has developed a secure Medical Cloud Infrastructure that empowers EMR Companies to meet 2014 CERHT requirements. By combining a secure platform that integrates seamlessly with existing EMR applications, a powerful suite of MU2 business services and a flexible pricing model, Evolve Exchange enables EMR vendors and their providers to meet Meaningful Use Stage 2 objectives.
